

JASON KNOWLES

SENIOR SOFTWARE ENGINEER

jknowlesdev@gmail.com • (774) 321-0974 • Worcester County, MA • jknowlesdev.com

SUMMARY

Versatile Senior Software Engineer focused on scalable frontend architecture and legacy stack modernization. Pursuing full-stack opportunities across the JavaScript and TypeScript ecosystem.

PROFESSIONAL EXPERIENCE

Software Engineer EvoText / Content2Classroom (C2C)	June 2021 – Present <i>Carlisle, MA (Remote)</i>
---	---

- Shaped and evolved C2C's multi-tenant SaaS pattern with React and MobX, where each tenant is defined by a config-driven theme: CSS variables for branding, i18n for text, and feature flags for functionality. Powering over 20 EdTech publishers, collectively reaching millions of users.
- Consolidated per-tenant standalone repositories into a single dynamic codebase, cutting new custom theme delivery from roughly 10 days down to 2.
- Integrated the frontend for SSO (Google Classroom, Clever, ClassLink) and LTI (Canvas) into the multi-tenant platform, enabling per-publisher configuration without code changes.
- Modernized the legacy lesson-delivery player from jQuery and Kendo UI to React with MobX, improving accessibility, modularity, state management, and long-term maintainability.
- Built WCAG 2.2 AA compliance into every new feature from the start, where accessibility is part of the implementation itself, preventing failed audits and hours of remediation.

Software Engineer Aveniros	December 2018 – June 2021 <i>Woburn, MA</i>
--------------------------------------	--

- Engineered the frontend of a Dockerized bilingual English and Arabic tablet portal using Angular, RxJS, and RTL layout for Egypt's national exam reform under a Pearson contract, supporting hundreds of thousands of concurrent students.
 - Modernized legacy AngularJS and jQuery codebases to modern Angular with TypeScript integrated with Spring Boot via REST APIs, unlocking type safety and long-term maintainability.
-

PERSONAL PROJECT

jknowlesdev.com	github.com/jknowlesdev/portfolio
------------------------	---

- Created an interactive portfolio to demonstrate cross-framework portability of C2C's multi-tenant SaaS pattern while sharpening full-stack skills.
 - Developed a modern full-stack codebase on Next.js 16, React 19, TypeScript, Zod, PostgreSQL (via Neon), Drizzle ORM, and Vercel, with a scaffolded backend (for future CRUD, authentication, and role-based access control).
 - Implemented configuration-driven themes as self-contained CSS and JSON bundles, each defining CSS variables for branding, next-intl for text, and feature flags for functionality.
-

EDUCATION

Bachelor of Science in Computer Science Worcester State University · Concentration in Software Development · Dean's List 2015 – 2018	2015 – 2018 <i>Worcester, MA</i>
